**BOILER**  
 MAKER AND REPAIRER,  
 Silver City, N. M.  
 All work warranted. Orders by  
 mail promptly attended to.

**Cattle Notes.**  
 Grades from approved cattle  
 breeds are those that bring the top  
 price in the beef markets.

Cattle shipments from Texas  
 for the remainder of the year will  
 be light as compared with the past  
 six months.

If any cattle man doubts the  
 efficacy of good breeding, let him  
 watch the difference in the way  
 well bred cattle and common stock  
 sell in the market.

The horns, when quite young,  
 can easily be prevented from grow-  
 ing by applying to them either  
 caustic soda, or one of the many  
 preparations mixed for that pur-  
 pose. The United States depart-  
 ment of Agriculture has issued the  
 following directions with this ob-  
 ject in view: Mix fifty parts  
 caustic soda, twenty-five parts ker-  
 osene oil, and twenty-five part of  
 water. An emulsion is made of  
 the kerosene and soda by heating  
 and vigorously stirring, and this  
 is then dissolved in water. The  
 mixture should then be placed in  
 a bottle with a solid rubber cork.  
 In applying, the calf should not be  
 over three weeks old, five to  
 twenty-five days being the proper  
 age. With scissors clip the hair  
 around the embryo horn, exposing  
 a spot about the size of a nickel.  
 Hold the calf securely and drop  
 two or three drops of the mixture  
 upon the horn, and with the end  
 of the rubber cork rub it in thor-  
 oughly over the bare spot. Apply  
 the fluid first to one horn then the  
 other until each horn has been  
 gone over three or four times. The  
 rubbing should be continued until  
 the caustic has softened and remov-  
 ed the hair and surface skin im-  
 mediately around the horn. Care  
 should be taken that the fluid does  
 not spread over a large surface or  
 run down the sides of the face.  
 The mixture must be carefully and  
 thoroughly applied; if used care-  
 lessly, the embryo horns may not  
 only be killed, but the face of the  
 calf be disfigured. This method  
 is not only less cruel to the animal,  
 but it is said, leaves the head in  
 better form than when dehorning  
 is practiced in the old way.

Charles, Goodnight, of Good-  
 night, Texas, a cattleman of large  
 experience, and the discoverer of  
 the simple process for rejuvenating  
 old, played out bulls, making them  
 serviceable for many years over  
 and above their natural period, has  
 located the cause of "big jaw" in  
 cattle, and gives his experience to  
 the Texas Live Stock Journal, as  
 follows: You may say that I have  
 discovered if used in time, a sure  
 cure for "lumpy" or "big jaw" in  
 cattle. This disease never makes  
 its first appearance on an animal  
 over four years old—cattle over  
 this age may be found suffering  
 with "big jaw," but the incipency  
 of the disease will invariably date  
 back to when the animal was un-  
 der four years old. It is caused by  
 a failure to shed a tooth at the  
 proper time. If the tooth causing  
 the trouble is removed before it  
 has run on too long, the animal  
 will in every circumstance get well.  
 I have cured hundreds of them and  
 know what I am talking about.  
 You can generally locate the tooth  
 that is causing the trouble, but  
 failing to do so remove two or even  
 three if necessary to insure get-  
 ting the right one. It is similar  
 to what is known as blind tooth in  
 horses, and should be treated pre-  
 tly much the same way." Contin-  
 uing Mr. Goodnight said, "Notwith-  
 standing the opinions of veterinary  
 surgeons to the contrary, I am pre-  
 pared to show by actual demon-  
 strations that the much talked of  
 lumpy jaw is nothing more nor less  
 than a tooth that by failing to drop  
 out at the proper time is causing  
 its would be successor to grow  
 backwards and into the jaw bone,  
 and thus setting up an inflamma-  
 tion that continues to grow from  
 bad to worse until it finally kills  
 the animal. If the blind tooth is  
 removed in the early stage of in-  
 flammation the animal will get en-  
 tirely well every time."

**The Future of Beet Sugar.**  
**American Farmer.**  
 This industry has not been forced,  
 and its comparatively slow  
 growth may cause some to under-  
 estimate its great possibilities of  
 benefit to the whole country and  
 as a factor in developing the rich-  
 ness of some of our states not now  
 regarded as highly agricultural.

It has not been possible to boom  
 this business, and the slow and  
 conservative methods necessary in  
 the industry are making its founda-  
 tions strong and lasting.

While but few, if any, new fac-  
 tories were built during 1892, the  
 total output of sugar was upwards  
 of 27,000,000 pounds, as against  
 12,000,000 pounds during 1891.  
 Nebraska, California and Utah  
 now produce the most of this  
 sugar but the soil of Wyoming is  
 peculiarly adapted to the sugar  
 beet, and new factories are likely  
 to be erected there. The climate  
 of Michigan is also well fitted for  
 the sugar beet and with her better  
 shipping facilities, capital is al-  
 ready looking in that direction for  
 investment. Foreign sugar man-  
 ufactures, both in West Indies and  
 continental Europe, are commen-  
 cing to realize that we are soon to  
 produce all of our sugar. In qual-  
 ity and equipment we now  
 equal the best work of Europe as  
 regards beet sugar, but the culture  
 of the beet has not reached the  
 satisfactory point to either buyer  
 or raiser that will come with ad-  
 ded years of experience.

There are difficulties peculiar  
 to our climate and method of farm-  
 ing. In most of the states men-  
 tioned, labor is scarce and high,  
 the fact existing that, while every  
 city swarms with unemployed men  
 few of them seek the rural dis-  
 tricts, and that the beet raising in-  
 dustry can only utilize labor for a  
 portion of each year, adds to the  
 difficulty. Machinery in time will  
 supplant much hand labor and  
 leave a good margin for the beet  
 planter and sugar maker. Level  
 culture of most hoed crops is be-  
 ing adopted by progressive farm-  
 ers, yet in the cultivation of the  
 sugar beet, hill culture is clearly  
 the most productive. There has  
 also been a great waste of raw ma-  
 terial at the factories, seemingly  
 unavoidable, which has also served  
 to keep down buying prices, but  
 with the introduction of cold stor-  
 age, and keeping the beets for  
 months in silos, this waste is be-  
 ing lessened.

The sugar beet industry will al-  
 so reduce the cost of milk and but-  
 ter in the sections of the country  
 where it is introduced, for during  
 the winter the beet pulp refuse  
 can be purchased at a nominal  
 sum, and the highest authorities  
 now concede it to be a valuable  
 feeding ration.

Building of new factories will  
 depend upon the continuance of  
 the sugar bounty and for the pros-  
 perity of this great industry some  
 reliable legislation is demanded—  
 something that can be depended  
 upon for a period of years. Until  
 this is accomplished, capitalists  
 will hesitate before investing  
 largely.

Last Friday some wood choppers  
 near York's discovered three In-  
 dians near their camp. They came  
 in to wait till the Indians had de-  
 parted. On Saturday young John  
 Parks and his brother Will were  
 about twelve miles above Solomon  
 ville, then they discovered a horse  
 staked. They rode up to see what  
 the cause was, but before they  
 reached him they saw an Indian  
 come over the ridge toward the  
 horse. They concluded the Indian  
 could take care of him and so left.  
 This Indian and two others follow-  
 ed them for several miles and the  
 boys thought they had a scrap on  
 hand, but luckily for them the In-  
 dians did not mix up with them—  
 Liberal.

The only way to cure fever and  
 ague is either to neutralize the  
 poisons which cause the disease or  
 to expel them from the system.  
 Ayer's Ague Cure operates in both  
 ways. It is a warranted specific  
 for all forms of malarial disorders,  
 and never fails to cure. Try it.

**Jonh Billings on Ducks.**  
 "The duck is a kind of a short  
 legged hen. Their feet is like a  
 small spiders web only more sub-  
 stantial built. They are amphi-  
 bious, and can sail on the water as  
 natural and easy as a grouse spot.  
 They can div in the water as han-  
 dy as a bull frog, and never get  
 water soaked.

Ducks have a broad bill. They  
 are more profitable to keep than  
 a hen bekas they can eat so much  
 faster. The duck is a good hand  
 to raise feathers. There are eny  
 more room on the outside for eny  
 more feathers. They shed their  
 feathers by having them pulled  
 out for beds.

A ducks feather bed is a good  
 place to raise a night mare on.  
 Men often call their wives "their  
 dear ducks"—this is on account of  
 there big bills.

The duck is not the most profit-  
 able bird extant for vittles, for  
 when you have got oph the feath-  
 ers, and pull out there stommick,  
 there arent any more duk left. There  
 legs are located on there body lik  
 a pair of hind legs, and i have seen  
 them eat till they tipt over for-  
 wards. Ducks lay eggs but don't  
 lay them around loose. Hunting  
 ducks eggs is a mighty clos tran-  
 sakshun. A man couldn't earn  
 30 cents a day and board himself,  
 hunting ducks eggs.

Sometimes ducks gets lame and  
 when it does it lays rite down and  
 gives it up. There arent no 2 leged  
 thing on the face of the earth kan  
 outlimp a lame duk."

Cats have for some time been  
 known to be the means of convey-  
 ing the infection of diphtheria,  
 and now they stand arraigned on  
 another charge of a similar nature.  
 A surgeon (says the London cor-  
 respondent of the Manchester  
 Guardian) has just distinctly  
 traced an outbreak of scarlet fever  
 in a house to the intrusion of a  
 cat from an infected household,  
 and it is even said that a case has  
 come under the notice of a medi-  
 cal officer of health in which  
 small-pox was so conveyed.

Don't Swear.—A newspaper man  
 who evidently believes in telling  
 things just as they are, says: "Do  
 not swear. There is no occasion  
 to swear outside of a printing of-  
 fice. It is useful in proof reading  
 and indispensable in getting forms  
 to press, and has been known to  
 assist in looking over the paper  
 when it is printed, but otherwise  
 is a very disgusting habit."

There is a firm in Ohio which,  
 according to its own statement,  
 has furnished for a number of  
 years past sermons, lectures and  
 literary productions to many min-  
 isters throughout the United  
 States. For stock sermons the  
 terms are \$1.50; for a sermon on  
 a topic assigned, \$3.00. Lectures  
 are from \$5 to \$50, according to  
 style, length etc., and the firm  
 pledges itself not to duplicate any  
 production within a radius of 200  
 miles.

Ayer's Sarsaparilla is one of the  
 few remedies which are recom-  
 mended by every school of medi-  
 cine. Its strength, purity and ef-  
 ficacy are too well established to  
 admit of doubt as to its superiori-  
 ty over all other blood purifiers  
 whatever. Ayer's Sarsaparilla  
 leads all.

The Hopewell mill on the Ani-  
 mas, after being fired up for sev-  
 eral days last week and the ma-  
 chinery placed in perfect form by  
 Supt. Nickle, is now working on a  
 fifty ton lot of Hirsch & Reche  
 ore. Completing this mill will  
 run on Trippe and Red Mountain  
 mine mineral.—Advocate.

**Royal**  
**Baking Powder**  
 Absolutely Pure

A cream of tartar baking powder.  
 Highest of all in leavening strength  
 —Largest United States Govern-  
 ment Food Report.  
**Royal Baking Powder Co.,**  
 100 Wall St., N. Y.

Mr. Theodore Bonault, of Las  
 Cruces, has the only cannery in  
 New Mexico, and if it receives the  
 proper encouragement it will be  
 much larger.

The Socorro Fire clay works will  
 probably resume as soon as the  
 financial situation gets easier. Sev-  
 eral parties will make an effort to  
 secure the valuable plant.

Danduff is an exudation from  
 the pores of the scalp that spreads  
 and dries, forming scurf and caus-  
 ing the hair to fall out. Hall's  
 Hair Renewer cures it.

The war department will prob-  
 ably construct a telegraph line  
 from San Antonio to Carthage to  
 connect with its Fort Stanton line.  
 This is made necessary by the  
 abandonment of Carthage.

The new agent at Towne Station,  
 C. E. Lyndap, who was recently  
 promoted from Las Cruces, ab-  
 sconded with the company's funds,  
 Wednesday. F. F. Winter has been  
 appointed agent at that station.

There is no longer any doubt  
 that the Pope's choir will be heard  
 at Chicago during the Exposition.  
 Director Mustafa has accepted the  
 invitation of the World's Fair  
 authorities and has also promised  
 that his choir of forty voices will  
 sing in the Cathedral of New  
 York.

E. V. B. Hoes, manager of the  
 Kangaroo silver mines at Kingdon,  
 after mining and shipping ore in  
 the teeth of a ruinous market for  
 six weeks or more, laid off most of  
 his men last week.

Was it an Error?—Whoever  
 dips into Mr. Wheatley's little  
 volume on "Literary Blunders"  
 will probably become suspicious  
 that printers are often waggish in  
 their blunders. Fancy a reporter  
 being made to say, apropos of a  
 cow getting on the line in the way  
 of an express, that the engine-driver  
 "put on full steam, dashed up  
 against the cow, and literally cut  
 it into calves."

Two wave motor pumps have  
 been in operation some time out  
 near the Cliff House not far from  
 San Francisco, that have raised  
 1,000,000 gallons per day into a  
 reservoir at an elevation of 100 feet.  
 The Pacific Lumberman says:  
 "This appears to be the best result  
 that we know as having been ob-  
 tained from the various wave mot-  
 ors that have been tried during  
 the past six or seven years."

Wanted It in Advance.—Poet:  
 Can I see the editor?  
 Office Boy—Yes, if you'll give  
 me a dime.  
 Poet—I will when I come out.  
 Office Boy—Yes, but you won't  
 have time then.

First New Yorker—So you have  
 got back from Chicago. I sup-  
 pose you have learned a great  
 deal.  
 Second New Yorker—Well, I've  
 learned how to get along on one  
 meal a day.

**DR. PRICE'S**  
**Cream Baking Powder.**  
 The only Pure Cream of Tartar Powder.—No Ammonia; No Alum.  
 Used in Millions of Homes—40 Years the Standard.
